

In my school, Union High School of Union Public Schools in Tulsa, Oklahoma, for me as a teacher we use digital learning to provide online classes, meet Common Core State Standards, take state mandated tests, administer online assessments, and provide Learning Management Systems to our students and teachers. We also provide each student with their own email address, use Naviance to help with college and career readiness, use an online gradebook so that parents and students can access their grades and contact teachers. An example of digital learning for me is a blended classroom where students use totally digital curriculum for our course and we meet for lectures weekly to support the online curriculum. However, Union Public School's network is barely keeping up with demand, and the need for a reliable high-speed network is only going to increase in the near future. Our WiFi access points are overloaded because of the student demand. Students are ready for electronic access and they need it to be competitive and successful in today's community.
